

CLAIMS

- I claim that I have invented a rigid frame that supports a backpack and a concealment blind from an elevated tree stand position or from a ground position.
- I claim that the frame will support the backpack with the entry compartments on the user side (not the carrier's side) facing toward to occupant of the blind.
- I claim that the frame will hang in a vertical position from the seat portion of the tree stand and when on the ground will stand vertical with ground penetration from the bottoms of the frame system.
- I claim that I have designed a backpack and two concealment blinds for use with this frame system.
- I claim that the concealment blinds may be permanently attached or detachable.
- I claim that I have invented a backpack that converts into a concealment blind
- I claim that when used as a concealment blind the backpack retains its function and utility as a pack.

CLAIMS, Continued –

- I claim that the backpack is part of the concealment blind when the concealment blind is in use.
- I claim that I have invented a concealment blind and a pack that hangs outside of a tree stand's user space
- I claim that the frame system will have a weapon and/or equipment holder located for user access on top of the frame.
- I claim that the rigid frame may be made of aluminum or other metals or fiberglass or plastics.
